You are given a **directed unweighted** graph with N nodes in an adjacency list format. The nodes are numbered from 0 to $N-1$. Your task is to convert it into an adjacency matrix representation.

Input

The first line contains a integer N ($1 \leq N \leq 100$) — the number of vertices.

The next N lines describe the adjacency list:

1. The i -th line starts with an integer k , indicating the number of nodes adjacent to node i .
2. The next k space-separated integers represent the nodes adjacent to node i .
3. Nodes are numbered from 0 to $N-1$.

Output

Print an $N \times N$ adjacency matrix, where the cell at row i and column j

- 1 if there is an edge between nodes i and j
- 0 otherwise.
